The BYD Smart Baby
Band

What is A.I?

AI also known as Artificial intelligence, is the simulation of human intelligence processes by machines, especially computer systems. AI is a branch of *Computer Science* and also a field of study that focuses on building and managing technology that can learn to autonomously make decisions and carry out actions on in place of a human being.

1. **Reactive AI** relies on real-time data to make decisions.
2. **Limited Memory AI** relies on stored data to make decisions.
3. **Theory of Mind AI** can consider subjective elements such as user intent when making decisions.
4. **Self-Aware AI** possesses a human-like consciousness that is capable of independently setting goals and using data to decide the best way to achieve an objective.

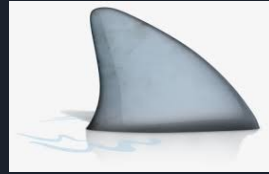

Explanation of AI Technology

AI is not a single technology. AI has a large number of functions that includes any type of software or hardware that supports machine learning, computer vision, natural language understanding (NLU) and natural language processing (NLP).

AI used in our product are Limited Memory AI using stored data to make decisions. The stored data is based on Dunstan Baby Language theory and our AI detects pitches, sounds, and behaviors from the baby. Our AI will store the data and learns over time the patterns that correlate to specific needs. So the AI will become more accurate as time passes in interpreting the specific needs of the baby, our app will notify and display an output of the baby's needs.

The Product

BYD Smart Baby Band

Price: \$300

Features:

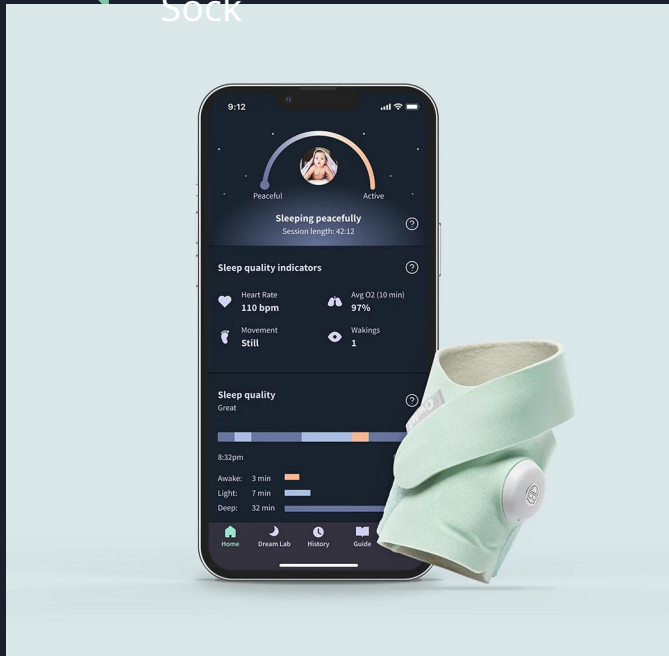

- Uses AI technology to learn and detect patterns in your baby's cries and behavior to formulate a proper response
- Vital health monitoring (heart rate, blood pressure, average oxygen level, and temperature)
- Wearable on the child's wrist
- Can be paired with the BYD Smart Baby App
- 12 hr battery life of continuous use (battery life may differ as more frequent mic usage, the shorter the battery life)
- Fully charged in 1 hr

What is included:

- BYD Smart Baby Band
- QR codes to download, access, and pair the band with the BYD Smart Baby App

Comparison to our competitors:

The Owlet Dream Sock

\$299

Features:

- Tracks specifically sleep quality indicators (heart rate, average oxygen level, movement)
- Tracks sleep and wake cycles of the baby
- The app that comes with the sock will alert the parent when they should lay the baby down to rest to prevent the baby from getting overtired.
- 18 hr battery life, fully charged in 30 mins

What's Included

Everything you'll get when your Dream Sock arrives.

One Dream Sock Sensor

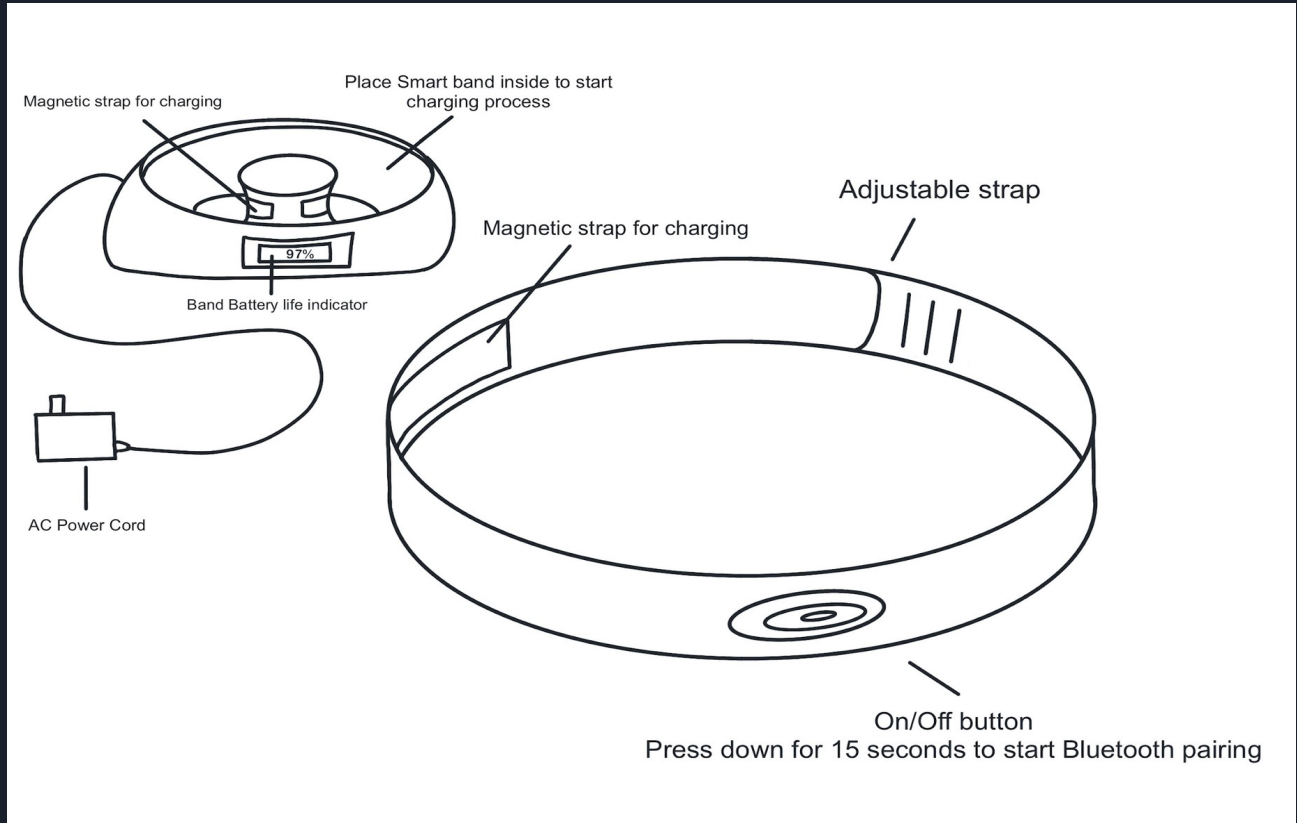

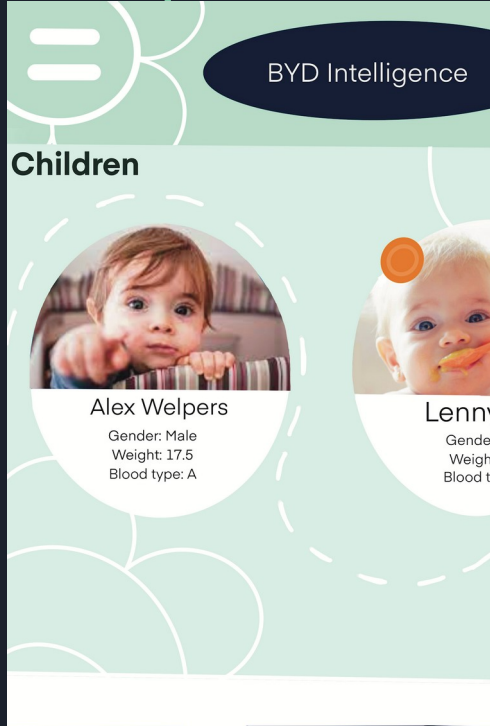

Four Fabric Socks - Fits babies 0-18 months, 5-30lbs

Wireless Charging Base Station

Access to the Owlet Dream App and our Predictive Sleep Technology

[Sock Plus Only] Two Toddler-Sized Fabric Socks (30lbs to 55lbs)

Prototype Smart Baby Band & App

ETHICAL GAP ADDRESSED BY THIS PRODUCT

“AI cannot be identified as human biologically, philosophically, or legally, and should not be given human rights because they cannot hold a human conscious and giving them human rights would endanger the entirety of human civilization.”

The point of technology and smart/AI devices is to assist humans. While we can program them to be capable of many human actions, the more they have control over, the greater danger they pose. Our company's products promote the assistance aspect of technology and AI to ensure humans always hold their own roles in society, but can function with ease.

Research

- Foundations from the Dunstan Baby Language

Neh: "I'm hungry/need to feed."

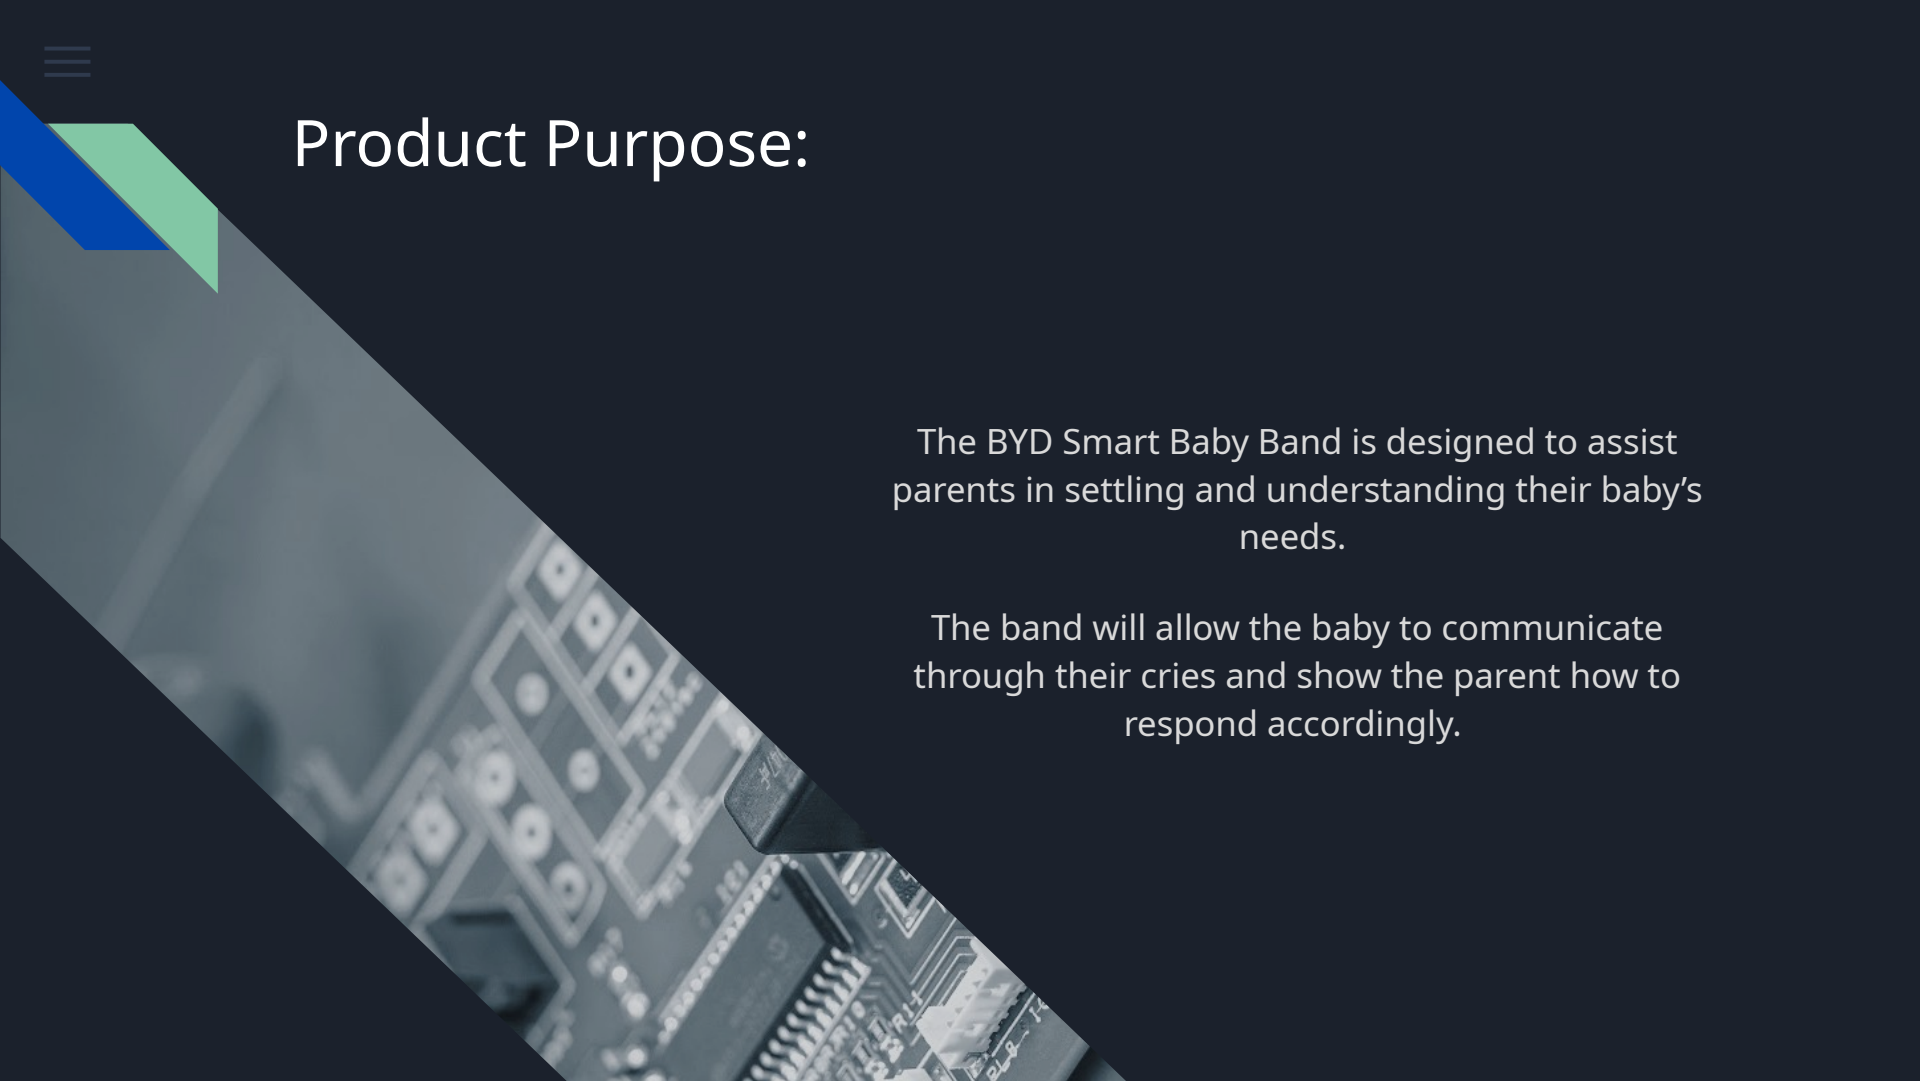

Eh: "I am gassy and need to burp."

Eairh: "I need a diaper change or I need to poop."

Heh: "I am physically uncomfortable."

Owh: "I am tired."

Product Purpose:

The BYD Smart Baby Band is designed to assist parents in settling and understanding their baby's needs.

The band will allow the baby to communicate through their cries and show the parent how to respond accordingly.

Target Audience

Our product's target audience is parents and caregivers with newborn babies, both new and experienced parents would benefit from the product and the service it provides.

Benefits and Drawbacks

Benefits:

- Understand what your baby is asking even though they cannot speak yet
- Vital health monitoring
- The ability to monitor your baby from another room
- Relieves the stress and worry caused by hearing your baby cry for extended periods of time as well as health concern related worries.
- Eliminates having to go through the process of trial and error to understand what your baby is asking

Drawbacks:

- Introducing such advanced technology into your child's life at such an early stage.
- Concerns of EMF-radiation
- Potential damage to the device or worries of it harming or restricting your baby as they kick or roll

Sustainability

Our product is made from Organic cotton, a natural biodegradable fiber that is processed without chemicals or fertilisers making safe for the baby and sustainable.

We also have made it so that the electronic parts are removable, so the cloth band can be washed. If the cloth band is damaged, it can be recycled or composted and replaced for free under warranty or buy extra cloth bands on our store website.

Other features that makes our product sustainable

- use recycled rechargeable batteries.
- Minimize transportation cost by building manufacturer facility in US, Europe, and Asia.
- Can trade in old versions of product for newer version (old versions of product will be either recycled and/or refurbished into the latest versions and sold at a cheaper price).

Data Analysis: Feedback

“I believe that as of right now, developments in artificial intelligence have overall benefitted the world. Thanks to AI, many tedious tasks have been simplified and we can do things more efficiently. Additionally, some AI has provided us with more safety, such as digital assistants in our phones or vehicles.” -Laura Centanni

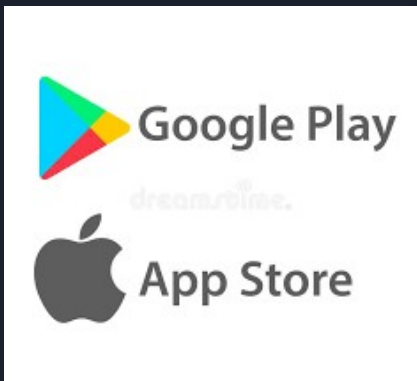

“I think that with the proper regulation, AI will be very beneficial to all of humanity the same way a computer changed the lives of everyone in the world. It is also a potential huge risk if it is not regulated as it can make its own decisions and can go against the wishes of humans. As long as the creators are careful with its development, AI has huge potential for benefits in the future.” -Maanav Mehta

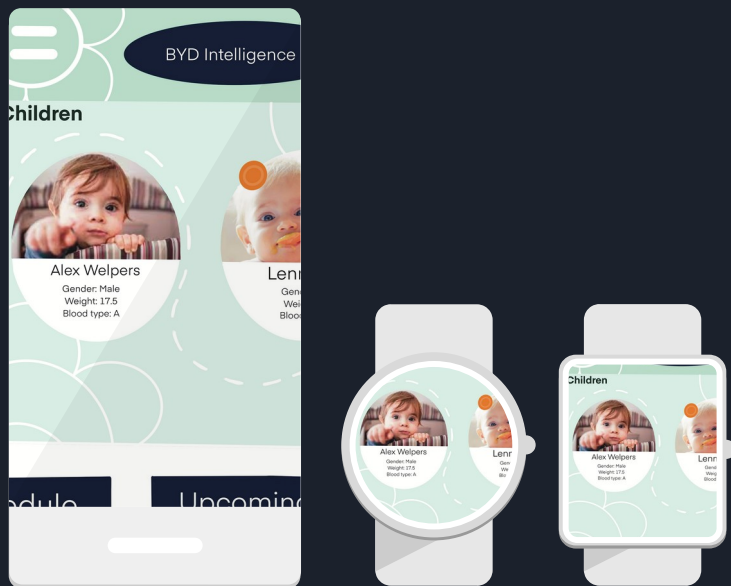

Cross Platform

Our product is accessible by mobile app and planned to be accessible by website soon as well.

Already accessible through Apple App and Google Play Stores.

Compatible with Wearable devices

The BYD Smart Baby app has the same functions as the app on mobile devices

Devices compatible with the app are the Galaxy Watch Series and the Apple Watch Series

BYD Intelligence

Children

Alex Welpers

Gender: Male
Weight: 17.5
Blood type: A

Lenny

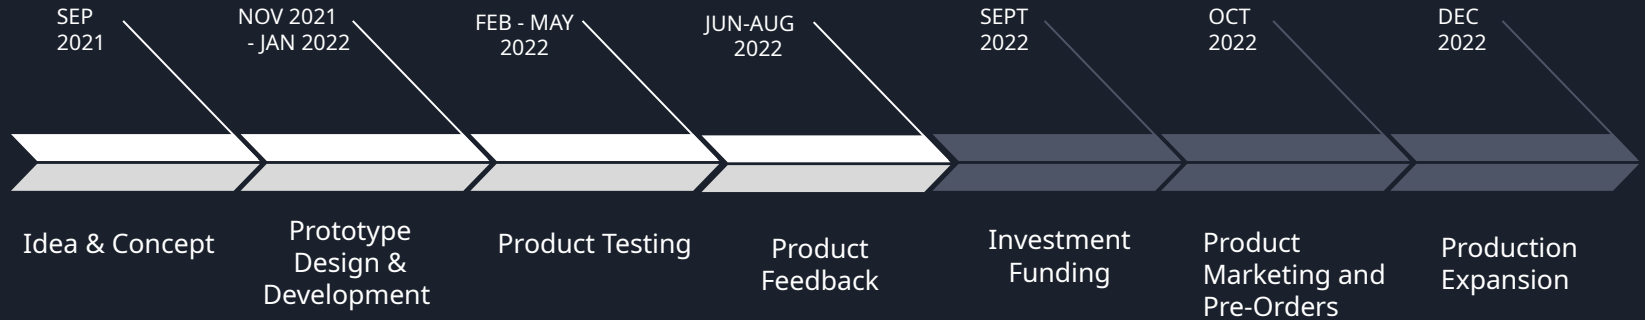

Gender:
Weight:
Blood ty

Mobile App Features for both Android and IOS

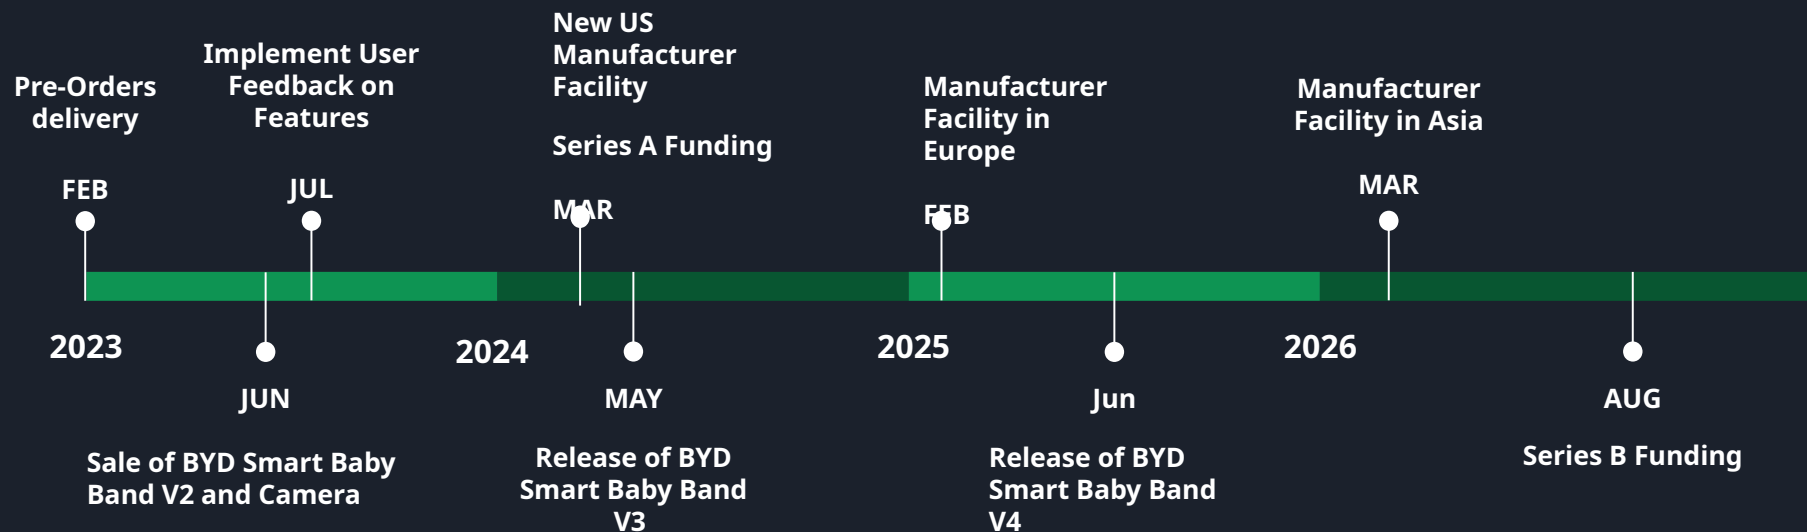

- Can register multiple children
- Keeps track of your child's needs
- Notifies parents to any health problems
- Will soon allow you to listen in on your child's surrounding and see as well
- Suggests actions for parents to take in certain situations
